Connection Method

Put scanner connect the dedicated joint, on the other side plug into PC port.

If the barcode configuration was turned off, please turn on the barcode configuration.

Enable/Disable Configuration barcode

Scanner can set up when enabled barcode function. In contrast, the scanner can't set up if disabled.

Need to switch on and set up again.

Enable Configuration Function (Default)

Disable Configuration Function

Version No.

Version Number

Default Settings

Scanning the below barcode can restore the scanner the default.

Restore Default

Data Interface

This scanner support USB-KBW, RS232, USB Virtual Com. Scanning the below barcode is USB-KBW mode.

USB-KBW (Default)

Scanning the below barcode is RS232 mode.

RS232

Scanning the below barcode is USB Virtual Com mode (driver is needed).

USB Virtual Com

USB Keyboard Layout

Virtual Keyboard

Mode 1: Do not support output the characters between 0x20 to 0xFF by using the virtual keyboard, under the current keyboard layout.

The characters between 0x00~0x1F are output according to the definition of control characters (Refer to Appendix)

Model 2: Support output the characters between 0x20 to 0xFF by using the virtual keyboard.

The characters between 0x00~0x1F are output according to the definition of control characters (Refer to Appendix)

Model 3: Support output the characters between 0x00 ~ 0xFF by using the virtual keyboard

Turn Off (Default)

Turn On (Mode 1)

Turn On (Mode 2)

Turn On (Mode 3)

Selection Of Host Operating System In Virtual Keyboard Mode

MAC OS

LINUX

Barcode Encoding Configuration

In a normal situation, the barcode encoding was identified accurately.

Please use manual to set up if encountered peculiar characters, that make sure output barcode content correctly.

Auto (Default)

KOI8-R code

Output Encoding Format

To output correctly in the specified encoding format.

For example: It's GBK code when output in the Notepad /Excel; It's UNICODE when output in the Word.

When output is English/Latin-1 encode format, the output mode will affected by the function switch of virtual keyboard. When output is GBK/UNICODE, the output mode will compelled to virtual keyboard.

English/Latin-1 (Default)

GBK (Notepad/excel)

UNICODE (Word)

Invoice Function

Switch On/Off Invoice Function

OFF (Default)

On

To ensure the correct output of the invoice content, when switch on the invoice code function, please configure the Chinese character output mode to GBK code (Notepad/Excel), and at the same time switch off like Code ID, User-defined prefix/suffix, and starting character to change original barcode content function .

Configuration of instructions and examples

Example for user-defined prefix and suffix

You can edit 10 characters as prefix or suffix. (In order to make sure the prefix and suffix can output normally, please enable user-defined prefix or suffix first)

Example 1.1:

Set "XYZ" as prefix on all codes

Before set up, please search HEX value for all codes is "99" (Appendix: barcode type ID Table); find "X" "Y" "Z" HEX value is "58" "59" "5A" (Appendix: Visible Character ASCII Table)

Step: Set "User-defined Prefix"; Set "9" "9" "5" "8" "5" "9" "5" "A" (Appendix: data and edit barcode); Set "Save".

If you want to revise the scanned barcode before save, please set up "Cancel the data from previous read" or "Cancel a string of data from previous read" to reset. If you want to give up setting scan, then scan "Cancel current setting".

Example 1.2:

Set "R" as prefix on QR

Before set up, please search HEX value for QR code is "51" (Appendix: barcode type ID Table); find "R" HEX value is "52" (Appendix: Visible Character ASCII Table)

Step: Set "Custom prefix"; Set "5" "1" "5" "2" (Appendix: data and edit barcode); Set "Save".

Example 1.3:

Cancel Custom prefix in QR code

Step: Set "Custom prefix"; Set "5" "1"; Set "Save"

Note: If set up prefix on all QR codes, it will default all QR codes prefix after set up. In contrast, if cancel all prefix / suffix on barcodes, please set "Clear All Custom Prefix" and "Clear All Custom Suffix".

Example for barcode length range configuration

Please sure it not bigger than current maximum length range when set up minimum length. Otherwise, it will show error. In the same way, must be make sure it's not smaller than current minimum length range when set up maximum length.

Example 2.1:

Set Code 128 length range is 4-12bit

Step: Set "Code 128 Minimum (0~50bit)"; Set "4"; Set "Save"

Set "Code 128 Maximum (0+-50bit)"; Set "1" "2"; Set "Save"

Example 2.2:

Set Interleaved 2 of 5 length is 14bit

It can set up by "ITF25 14bit", through barcode length range of Maximum / Minimum to set, too.

Step: Set "Interleave 2 of 5 Minimum (0~50bit)"; Set "1" "4"; Set "Save" Set "Interleave 2 of 5 Maximum (0+50bit)"; Set "1" "4"; Set "Save"

Example 2.3:

Set Code 39 length is random length

Step: Set "Code 39 Minimum (0~50bit)"; Set "0"; Set "Save"

Set "Code 39 Maximum (0+50bit)"; Set "0"; Set "Save"

Example for USB keyboard transmit speed configuration

If PC in a lower function, it will appear error status. Need to set up a slow scanning speed with customized under USB keyboard mode. Such as: 50ms

Step: Set "Custom Sending Speed"; Set "5" "0"; Set "Save"

Warning Tone

It will appear error warning for 4 times in a continue while transfer failure barcode. Please check if it's normal work when appear this situation.

Read Skills

To get a good reading performance, a beam of aim light from scanner should be aimed at the centre of barcode, support to aim in any directions for read convenient, too.

More nearly barcode, the beam of aim light is smaller; More further barcode, the beam of aim light bigger. For reading barcode correctly, if barcode small, the scanner should be close to barcode, if barcode big, the scanner should be farther to barcode.

If the barcode is highly reflective (for example: coated surface), please adjust the scanner angle to read it successfully.

Safety

Please not direct aim eye when the scanner has a strong ray of light, to avoid causing any hurt or unwell.
